

# What Physics Needs Today: A Few Good Anachronisms

CYNTHIA WHITNEY

*Cynthia Kolb Whitney*  
*Editor, Galilean Electrodynamics*  
*Visiting Industry Professor, Tufts University, Retired*

**Abstract.** My belief is that Physics went astray early in the 20<sup>th</sup> century by neglecting much good information, some of it from ancient times, some from then very recent times, and some that would become available only at about mid-20<sup>th</sup> century. There might even be more relevant information to come, although I don't think it is what people currently think it is – information about the 'dark' stuff!
